SUMMARY

Flutter Developer with 2+ years of experience building and publishing cross-platform mobile applications using Flutter, Bloc, Firebase, and REST APIs. Experienced in App Store and Google Play releases, CI/CD automation with Codemagic, and collaborating with backend and UI/UX teams to deliver scalable products.

EXPERIENCE

IntraZero | Flutter Developer Aug 2024 - July 2026

- Built and delivered +5 cross-platform mobile applications serving thousands of users, collaborating with backend and UI/UX teams to create seamless, user-friendly experiences.
- Published applications to the App Store and Google Play, integrating RESTful APIs, external SDKs, and applying scalable state management with Cubit/Bloc.
- Streamlined development workflow by implementing CI/CD pipelines with Codemagic, improving build, testing, and deployment efficiency.

Google Development Student Club (GDSC) | Flutter Instructor Oct 2023 - Jan 2024

- Conducted Flutter development training, mentored students on coding and app architecture, and organized workshops to enhance technical and problem-solving skills.

PROJECTS

Yafleet | Shipping Abroad 

- A cross-platform application for optimizing fleet and driver management.
- Designed dashboards for real-time vehicle status, trip history, and maintenance alerts to enhance operational visibility.
- Integrated Flutter, Dio, and Cubit for efficient state management and seamless backend communication.
- Automated build and release processes using Codemagic CI/CD for rapid delivery.

Heaven Flowers | E-Commerce  

- Developed a cross-platform flowers and gifts marketplace app featuring product catalog, florist discovery, cart, and order tracking.
- Used Flutter with Bloc and Riverpod for state management, integrated Firebase for authentication/notifications, and Google Maps for location-based search and delivery.

Misr El-Kheir | Government Project

- Developed a cross-platform Flutter application enabling organization employees to collect and manage beneficiary case data.
- Implemented offline form data persistence, allowing employees to continue data collection without internet connectivity and sync data when connectivity is restored.
- Built dynamic forms with validation and conditional fields to support structured case data collection.
- Used Clean Architecture with Cubit/Bloc for scalable state management and maintainable code.
- Integrated REST APIs and local storage for reliable online/offline data handling.

SKILLSET

- Languages: Dart, Java, Kotlin
- State Management: Bloc, Cubit, Riverpod, Formz
- Backend & APIs: REST APIs, Dio, Firebase
- CI/CD & DevOps: Codemagic
- Tools: Git, GitHub, GitLab, Jira, Postman
- Platforms: App Store Publishing, Google Play Publishing

EDUCATION

Bachelor's degree in Artificial intelligence (GPA 3.5) Sep 2020 - May 2024
